# open collaboration for electronic design

Clear and consistent presentation of schematics,  
circuit boards and bills of materials accessible by  
both humans and machines on the Web.

# Positioning

- projects engaging to explore, easily embedded in Web pages and consumed in third-party applications *like Flickr and YouTube*
- a place for open source projects to collaborate, and for engineers to build a portfolio *like github*
- closed groups get things done with the minimum of fuss *like Basecamp or Google Docs*

# Open Source Hardware an emerging trend

New methods of collaboration are becoming apparent in Open Source Hardware. SolderPad provides explicit licensing and attractive hosting for influential Open Source Hardware projects, raising the visibility of exemplar projects and working practices to the electronics design industry at large.

# Current Status

solderpad.com opened to public in October 2011 with no publicity.

Within 10 days, 65 people registered, publishing 20 open source projects.

Working with early adopters, hackday at OSHCAMP, articles including in the RSA journal, negotiating with potential partners.

# Core Team

Andrew Back *9600*  
co-founder

Andrew is an [artist](#), electronics hacker and open source advocate. He acted as [BT's](#) Open Source Strategist, establishing company-wide open source policy and process and representing them at a number of bodies including [The Linux Foundation](#) and [ATIS](#). Andrew co-founded the [Electron Club](#) in 2006 — one of the UK's first [hackerspaces](#), and founded and runs [OSHUG](#), a monthly open source hardware meet-up in and around London, UK.

Paul Downey *psd*  
co-founder

Paul is a [doodler](#), a maker and a veteran communications software developer. He has been hacking embedded systems since the late 1970s. Formerly [BT's](#) Chief Web Services Architect, and lead [W3C](#) representative, he was until recently a member of [Osmosoft](#) — a small team building open source Web collaboration systems. Paul compères [OSHUG](#), a monthly open source hardware meet-up in and around London, UK.

# Next...

1. Develop collaboration features
2. Reconsider path to sustainability
3. Drive engagement

Thanks!
